

CalendarIndex

Provides:

Tap into our calendar database and use it to display the dates of public holidays and observances in your application. The database covers over 180+ countries worldwide, and it is constantly being updated and extended.

Key Provisioning:

Pain factor (0=ezipz...5=nightmare): 

- An API key is required for every request to the Holiday API. Your API key is used to authenticate you with our API, and it should be provided as a `api_key` URL parameter.
- The API key can be retrieved from the account pages. If you do know your API key please visit /login or signup for a free account key.
-

Quotas:

- 1,000 API requests per day
- 429 HTTP status code if exceeded

The Good:

- The API is brief and clean.
- The documentation tells you required fields.

The Bad:

- Too brief

The Ugly:

- [\[example JSON\]](#)
